

# Incident Response

We provide a discreet Data Protection and Information Security response service, in the event that you have an incident.

Our response services can help to limit the damage caused by an incident, by providing expert and independent investigation and remediation.

## How we can help you

### Incident response

Our CESG Certified consultants are able to crisis-manage Data Protection and Information Security incidents. When responding to an incident, our team works to discover its extent, including the identification of affected systems or assets.

We then create an impact assessment, identifying operational, cost, and reputational issues. Finally, we help your team to mitigate the immediate impact of the assessment. We can organise your internal response, forensic investigations, and regulator liaison.

## Investigation support

We know that regulator-led audits can be a daunting time for many organisations, and you may need somebody to hand-hold you through the process. During your external audit or investigation, we'll put a consultant on-site, to support your team, and to liaise directly with your regulator.

Our consultancy team has a good working relationship with UK regulators.

## Why choose us?

We have a detailed working knowledge of critical national infrastructure and general business incidents. Our team has conducted threat assessments, capability audits, and incident response, for aerospace, shipping, and defence (including on the ground in Afghanistan).

Our team hold industry qualifications such as CESG Certified Professional, Certified Information Systems Auditor, BSI Lead Auditor, and Certified Information Systems Security Professional. They have worked across the globe for clients in the aerospace, defence, pharmaceutical, and wider business sectors.
