PCI Data Security Standard

Our technical consulting team offers a simplified approach to PCI-DSS compliance. We can help you to identify and reduce your scope, risk assess your environment, create a gap analysis, and implement remedial actions.

Why choose us?

Our team has a thorough technical grounding, enabling us to understand your IT estate, and payment platforms. Our consultants have vast experience with modern technologies, including complicated virtualised environments.

Our team hold industry qualifications such as CESA Certified Professional, Certified Information Systems Auditor, BSI Lead Auditor, Certified Information Systems Security Professional. Our technical director has written fourteen books on Cisco networking, and is a Cisco Certified Internetwork Expert.

How we can help you

Scope identification and reduction

Identifying the scope of your Cardholder Data Environment is a vital part of PCI DSS compliance. Our technical consultants will help you to correctly scope your environment, and work with you to identify areas for reduction of the scope—saving you money and assessment time.

Gap analysis

Our experienced technical consultants will conduct an on-site assessment to identify key areas of weakness within your Cardholder Data Environment. At the end of the Gap Analysis, you will receive a report detailing your current strengths and weaknesses, complete with actionable points. This report will provide you with the information you need to minimise the risk of non-compliance during a PCI-DSS assessment.

Remediation

After we have identified your scope, helped to reduce it, and completed a Gap Analysis, our technical consultants can work with you to fix the issues identified—a process known as remediation. This remediation work puts your organisation in a position to achieve PCI-DSS compliance.
